

2 YEARS PUPPY GUARANTEE

1. A healthy pup upon arrival.
2. You must get the pup health checked by your vet within the week of arrival.
3. The pups come with a vet certification if shipped; otherwise request for health certificate must be requested if pup is to be picked up, it is the owners responsibility to have the pup vet checked within the first week of arrival to your home.
4. We guarantee against hip displasia for the first 2 years [crippling dysplasia] the dogs hips have to be compared to bulldogs and, and not the hips of another breed. X-rays also have to be sent to my veterinarian here. This part of the guarantee will be void for excessively overweight dogges; excess weight is detrimental to the joints of growing pups.
5. We guarantee against eye entropion due to genetics, entropion caused by injuries to the eye or eyes void this part of the contract. A scratched eye or injured eye that causes squinting for long periods may cause eyelids to be trained to roll in this breed.
6. We guarantee against severe breathing disorder
7. We guarantee against genetic heart disease [heart murmurs] etc.
8. We guarantee against elbow and knee displasia as well up to two years; this part of the guarantee will be void for excessively overweight dogges; excess weight is detrimental to the joints of growing pups.
9. We guarantee against generalized demodex [with generalized demodex dogs will lose 40% or more hair], medication for demodex is not effective if it is generalized. In the case of a diagnosed generalized case, the dogge must be sent back for assessment by my veterinarian and myself. If any occurs, we will replace the puppy. The buyer must return original pup for replacement and the buyer is responsible for shipping charges.
10. Localized demodex (demodex that shows a spot or two) can be treated and cured, and in most cases will not reoccur. We do not replace pups for localized demodex because it is curable and occurs in puppies because of stress and from growth spirts [most vets have differing views because they do not fully understand it.] The #1 problem in bulldogges is the skin & coat, a healthy diet is needed to maintain a healthy coat, we will supply information upon request on how and what to do to maintain a healthy coat.
12. We guarantee against the above, also as stated above we replace original puppy if it is returned; original puppy must be returned unaltered for contract to be valid.

NOTE: SUPPLEMENTS THAT ARE ADVISED BY STEPHANE PROVENCHER, MUST BE USED ON A REGULAR BASIS.

We feed a food called Diamond Professional and Diamond Large Breed 60+. If you can't find those I would suggest First Choice , Nutro Max, or Eukanuba. There are also a few supplements that are a must for bulldogges in my opinion.

1. Black Walnut is an HERB used to rid dogges of intestinal parasites. Never use it on a pregnant female

2. Brewers Yeast and Garlic, which are used for healthy skin, heart & cardiovascular. (Note: Also an aid for intestinal parasites.)

3. Joint Discovery or Glucosamine, which is a supplement used to help joints and hips mature so that problems are few.

4. These supplements are what we use for optimal health and nutrition, we have no problems due to hips, knees, immune system deficiency, hair and skin problems; we feel that these supplements serve as a protection and preventative for ailments that affect the bulldogge. See your vet for proper dose. These supplements are a must in order to validate this contract.

5. In the event that one of our dogges has problems due to skin, hair, or joint ailments, the dogge must be returned to undergo treatments of these supplements for a period of one month to see if they have an effect on the nature of the problem and to also be assessed by our veterinarian.

6. If the findings that the animal has been given poor care, which will be determined by your vet and mine, the dogge will not be returned but be placed in a caring home. If this instance is found, the dogge will not be replaced and no money will be refunded to you. We have found over the years that sometimes people will try and get money or a free dogge when there is no problem. We work very closely with the other registered kennels on our dogges with the best care and health in mind. We consult with them and our vet on all supplements that are used. We have spent years and have gone through many things to find out what works best for this breed and these supplements will give your dogge the chance of a healthy nutritional life.
